ACCESS SMART™ AND PC DYNAMICS JOIN FORCES TO OFFER AFFORDABLE PROTECTION AGAINST ID THEFT AND COMPROMISED DATA

*Individuals and Businesses of All Sizes Can Now Secure Confidential Information
Even If a Computer or Data Storage Device Is Lost or Stolen*

Ladera Ranch, CA – July 17, 2007 – Access Smart LLC, the leading developer of data and security management solutions through the use of smartcard technology, today announced its alliance with PC Dynamics to offer businesses and individuals instant and affordable data privacy protection. The partnership enables users to integrate Access Smart’s flagship products, Power LogOn™ Password Manager and Password Administrator, with PC Dynamics’ SafeHouse data privacy software for strong security and convenient data access that complies with all federal and state privacy laws.

“With the growing number of stolen laptops, malicious software programs and other network security breaches, the direct and indirect financial costs can be devastating,” said Dovell Bonnett, founder and CEO of Access Smart. “With our Power LogOn product, we have enabled individuals and businesses to safeguard their passwords using encrypted smartcard technology. Now, with the alliance between Access Smart and PC Dynamics, we can take that security one step further by encrypting portions of users’ existing hard drives while still maintaining the convenience and affordability that Power LogOn is noted for.”

2-2-2-2 Access Smart Announces Alliance with PC Dynamics

With the SafeHouse software, users can allocate portions of their existing hard drives to encrypt confidential data. Any confidential data stored on this portion of the hard drive will be encoded and can only be decoded by the person in possession of its password. Power LogOn keeps this password encrypted onto a smartcard, adding another layer of encoded protection. As the smartcard is unhackable and is rendered useless if stolen, users can be assured their information is kept private.

With Power LogOn, users can assign strong passwords such as "emFO%39iL5Nc305,9Z/4>6d" which are considered to be the most secure. To sign on to any account, the user inserts their smartcard into any card reader, double-clicks the file, network or web site to be accessed, and is instantly logged in. There is no need to remember, type or track any password, as this is all done automatically. A replacement card can be re-created instantly by the authorized user if it is ever lost or stolen. Because all the passwords are stored on the smartcard and never on any computer, the user can go to any computer with the Power LogOn software, have full access to all passwords, and leave no information behind when the smartcard is removed.

"SafeHouse and Power LogOn eliminate the hassles and complications of keeping information secure," said Peter Avritch, president of PC Dynamics and publisher of the encryption software. "Users don't want to manually encrypt and decrypt individual files or remember different complex passwords for every file. That's far too much work, and it's prone to errors that can ultimately cause data to be compromised. Saving confidential files to a new drive letter and automatically entering complex passwords with a double-click -- now that's something everyone can understand."

SafeHouse volumes can be any size up to 2084 Gigabytes on Windows NT/2000/XP and up to 4GB on Windows 98/Me. Volumes can reside on local hard drives, network servers, removable media and CD ROMs. The software offers a variety of encryption methods including DES, triple DES, Blowfish, Twofish and Rijndael, the new Advanced Encryption Standard (AES) algorithm.

"With SafeHouse and Power LogOn, individuals and businesses can protect their private data without expensive and time consuming back-end installations," said Bonnett. "As there are more and more cases of identity theft and laws being passed which require businesses to encrypt confidential information of employees and customers, this new double-product offering will enable all types of users the highest level of data security with unprecedented convenience, starting below \$100.

Power LogOn Password Manager and Password Administrator come with a free trial version of SafeHouse. The option to purchase a full version of SafeHouse is available through Power LogOn, Access Smart's web site, or directly from PC Dynamics.
