## Secure Services Corporation and Access Smart<sup>®</sup> Deliver Secure Personal Health Record Technology

### **Secure Services Corporation and Access Smart Join Forces to Provide Secure Access to Data and Unparalleled Protection from Online ID Theft and Unauthorized Data Access**

**Downers Grove, IL – May 11, 2009** – SSC's SHAPE Card™ Combined with Access Smart LLC's Power LogOn<sup>®</sup> Provides Smartcard Password Management with Biometric Authentication for the Most Robust Data Security.

**Secure Services Corporation (SSC) and Access Smart LLC have joined forces to offer the most robust Smartcard available in the market today.** SSC's SHAPE Card™ is a smart card using MULTOS, recognized for being the most robust and reliable secure smart card platform in the world. The SHAPE Card is a biometric match-on-card that verifies the user's identity, adding to the overall security of the smart card and any applications linked to the card. One of the critical features of the SHAPE Card is that it uses a fingerprint algorithm to affirmatively establish the card holder's identity but, the fingerprint never leaves the card and is not stored in anyone's database.

**Access Smart LLC's Power Logon 4.0 combines virtually unhackable password protection with the highest level of ease and convenience, which enables users to access all of their important data with secure passwords more quickly and effortlessly than ever before.** Users can assign, change and save up to 100 secure user names and passwords -- stored on one smartcard -- and with two mouse clicks, can instantly log on to any file, network or website with no further action required. With Power LogOn, users will not need to type or remember another password again.

**"The combination of our two technologies allows the client to determine the level of protection and convenience that they require,"** said Lester H. Keepper Jr., Chairman and CEO of SSC. "We anticipate that a hospital, for example, will have certain departments that will require the biometric authentication of the SHAPE Card and other departments will have less stringent identity management needs, but still want the security provided by Access Smart's Power LogOn protection."

**"Power LogOn is an important tool in defending against online ID theft and data breaches,"** said Dovell Bonnett, founder and CEO of Access Smart. "Power LogOn enables individuals to generate and store random, 20-character passwords derived from the 94 available keyboard characters. Users can also assign their own passwords, but can store them safely on their card where they cannot be discovered by others."

**The joint technology allows the IT manager to set computer access privileges on the smartcard so that each employee has different access permissions appropriate to their work functions.** He or she can also require that employees abide by preset password policies such as generating 20-character passwords or changing them periodically.

"The SHAPE Card is a key component of SSC's suite of SHAPE™ products for the healthcare industry," said Lester Keepper. "By adding Access Smart's Power LogOn, we have a solution that the healthcare industry will rely on." The SHAPE Card with Power LogOn will be used by the doctor and the doctor's staff to provide secure computer access and HIPAA-compliance. When used by patients, it will verify that a patient is who they say they are and, when used in a doctor's office, it can open the door to insurance payment information, electronic medical records and personal health information relevant only to that patient.

**"There is no doubt that the SHAPE Card with Power LogOn will reduce administrative costs in healthcare and other industries that deploy it," said Dovell Bonnett. "Our joint solution will allow data and internet users to regain control over their digital information and keep their data safe from identity theft."**

### **About Secure Services Corp. (SSC)**

Incorporated in 2004, Secure Services Corp. (SSC) leads the industry in developing solutions technology to provide secure, private and encrypted communications using identity-based biometric control management. SSC is establishing the principle that "trusted personal privacy information technology and encrypted communication will add to and provide for a secure U.S. health care system."

SSC's innovative patent-pending product suite **SHAPE™**, the **S**ecure **H**ealth **A**nd **P**rivacy **E**nvironment, includes encrypted and HIPAA compliant solutions for health care and other markets. The **SHAPE Card™** is the ultimate tool to ensure security and identity.
