**Small office / Home office**

***Personal data***

**By Craig Crossman**

*McClatchy-Tribune News Service*

If you're looking for a safe and easy way to keep track of your personal data within your office that contains many computers, or even your home with one computer and many family members who use it, you may want to look into a security system that solves the security problem with a card.

Equip your computer with Access Smart's Power LogOn ([www.access-smart.com](http://www.access-smart.com)) and you'll have the security you want and need in today's eyes-everywhere world.

Each Power LogOn Desktop Kit comes complete with a USB Smartcard reader, two Smartcards, five printable inkjet labels to personalize the cards and the necessary security software. Once installed, your Smartcard will remember all of your personal information, passwords, bookmarks, settings and whatever else make up your online identity.

When you wish to use a computer, there's no need to memorize passwords or anything else. Just insert your Smartcard and Power LogOn does the rest.

Surf over to a secure Web site for example, and watch Power LogOn automatically type in your user name and password. Your security is further enhanced because they can be long, cryptic passwords since you don't have to memorize and type them in anymore.

Pricing is \$129.95 for the desktop version and \$139.95 for the notebook edition.
