CYBERSECURITY – ACCESS-SMART PARTNERS WITH NCN TECHNOLOGY AS A VALUED RESELLER

LADERA RANCH, Calif., May 16, 2018 — Access Smart LLC, provider of innovative multi-factor authentication and logical access security control systems, announces a partnership with NCN Technology (NCN), a provider of web and mobile development services who is now authorized to sell Access Smart's Power LogOn – a Multifactor Authentication, IT Centralized Enterprise Password Management system.

The two companies share a common goal to help reduce the hacking epidemic by approaching cybersecurity in a more holistic manner. They are taking a customer-centric approach, by providing solutions that fit the clients' needs, budgets, and specific environments.

The Access Smart and NCN Technology partnership provides Government and Commercial clients with an authentication and logical access control solution that offers fast and hassle-free deployment. Power LogOn was purpose-built to fit onto existing security infrastructure.

"Our technology resellers are a cornerstone of our success, and we're thrilled to join with NCN Technology to provide their customers with an expanded set of authentication and access controls that are both robust and affordable," said Dovell Bonnett, Founder & CEO, at Access Smart. "Together we're helping agencies, companies and institutions safeguard their data with Access Smart's Cyber Identity Management features, such as Multi-Factor Authentication, IT centralized, and enterprise password management. NCN's advanced technology support further ensures the protection of confidential data, while offering fast, hassle free deployment for our customers."

NCN selected Power LogOn because the company needed a proven authentication tool that was flexible and could act as the first line of defense from security intrusions.

"This partnership with Access Smart enables us to present an easily integrated solution that is unparalleled in the marketplace," said Sharon Muniz, Chief Executive Officer of NCN Technology. "We're very excited to offer secure authorization and access controls for physical environments or devices in a package that does not forfeit security for

convenience. Their solutions are powerful, flexible, and greatly reduce the impacts of the cybersecurity problem."
